SUMMARY

Product Security Engineer Lead with 25+ years of software development, 12+ years of cyber and software testing, and 6+ years of technical leadership experience. Currently leading security test and verification efforts for B-52 avionics systems at Boeing, with specialized expertise in RF security testing, Anti-Tamper verification, and automated test tool development. Active Top Secret clearance with proven track record in leading cyber test events, developing enterprise test capabilities, and mentoring engineering teams.

EXPERIENCE

Product Security AT Software Lead | The Boeing Company | May 2019 - Present

- Active Top-Secret Clearance with SAP authorizations. Lead cyber test and verification for B-52 avionics radar display, ensuring DoD and Anti-Tamper certification compliance
- Serve on Boeing's Anti-Tamper Technical Board, reviewing verification strategies for AT solutions across all enterprise programs
- Develop test documentation (plans, procedures, reports) and architect automated test tools using Python, GoogleTest, FFF within CI/CD DevSecOps pipeline
- Lead team of 7 software engineers with code reviews, architecture decisions, and mentoring in secure development and test methodologies
- Conduct security assessments including vulnerability analysis, penetration testing, and risk mitigation for mission-critical aircraft systems
- Develop secure embedded C software (50% hands-on) for Anti-Tamper integrations per NIST SP 800-53 and DoD standards
- Coordinate with cross-functional teams, suppliers, and government agencies; represent security testing to Boeing and customer leadership

Cybersecurity IAM Analyst II | Sonic Drive-In Corporation | Feb 2019 - May 2019

- Conducted penetration testing using BloodHound to identify privilege escalation paths and critical vulnerabilities
- Architected secure PAM system across 2,000+ endpoints using containerized microservices; developed test methodologies for IAM validation

Security Ops Engineer Analyst | American Fidelity Assurance Company | Jun 2018 - Jan 2019

- Automated vulnerability scans and incident response using C/C++, Python, PowerShell scripts integrated with SOAR platform

Senior Security Engineer | Seagate Technology | Mar 2013 - Mar 2018

- Built automated security testing tool for SOX compliance; cross-referenced access lists with authorization status
- Led junior security engineers in full-stack security testing from Linux OS to application layers; conducted penetration testing on financial systems
- Developed security architectures per NIST CSF and ISO 27001; defined security test requirements for supplier integrations

Owner & Security Consultant | 9Seats Inc. | Jan 2008 - Present

- Conduct RF security testing for wireless systems: WiFi (DoS, deauth, key cracking), ZWave/Zigbee (SDR), RFID/NFC assessments
- Develop mobile/web applications with integrated security testing; lead international development teams
- Design secure software systems and vendor security requirements for 20+ organizations

ADDITIONAL EXPERIENCE

IT Systems Analyst | UTC Associates (on-site at Culver Studios) | Sep 2008 - Mar 2010

IT Systems Analyst | Trinity Broadcasting Network | Feb 2007 - Jun 2008

IT Manager | Euphonia Media Group LLC | Jun 2006 - Feb 2007

IT Consultant | TechnoClarity, Inc. | Apr 2001 - Sep 2004

IT Administrator | Corbin Hill | Jan 1999 - Apr 2001

LEADERSHIP

President and Chairman | (ISC)2 Oklahoma City Metro Chapter | March 2020 - March 2023

- Launched chapter, developed mentorship program for cybersecurity professionals

EDUCATION

B.S. in Information Technology, Security Emphasis | March 2019

Western Governors University | Salt Lake City, UT

SKILLS

Programming Languages: C/C++, Ada, Python, Bash, PowerShell, Perl

Security Testing & Verification: Penetration testing, vulnerability assessments, V&V processes, test automation, CI/CD DevSecOps pipelines, GoogleTest, FFF (Fake Function Framework)

RF Security Testing: WiFi security (DoS, deauth, key cracking), Software Defined Radio (SDR), ZWave/Zigbee protocols, RFID/NFC security, Flipper Zero, wireless penetration testing

Security Tools & Platforms: BloodHound, SOAR platforms, automated testing frameworks, vulnerability scanners

Security Architecture: TPM/Secure Boot, key management, Red/Black separation, Zero Trust, Anti-Tamper

Security Frameworks: NIST CSF, NIST SP 800-53, ISO 27001, DoD security standards

Cybersecurity Processes: Incident response, threat analysis, vulnerability management, Anti-Tamper verification, encryption, penetration testing, Red Team operations

Engineering Disciplines: Software engineering, systems engineering (avionics and defense systems), embedded systems, test engineering

CERTIFICATIONS

- CISSP - Certified Information Systems Security Professional
- CISSP-ISSEP - Information Systems Security Engineering Professional
- CISSP-ISSMP - Information Systems Security Management Professional
- CISSP-ISSAP - Information Systems Security Architecture Professional
- CEH - Certified Ethical Hacker
- CCNA - Certified Network Associate Routing and Switching
- CCNA Security - Cisco Certified Network Associate Security
